

Volunteers

We need volunteers of all backgrounds. Here are some ways to help.

Events Help set up, lead activities, take photos, or clean up afterwards.

Math and Technology Academy Assist students with math or science homework, or lead activities.

Test Activities Improve new activities by trying them with your group.

Evaluation Help assess the impact of our programs by observing and evaluating one or more activities.

Needs

We can always use:

- math manipulatives
- math books
- office supplies
- craft materials

All donations are tax-deductible.

Thank you for fostering enthusiasm for mathematics in our community!

Riverbend Community Math Center

Address: c/o Dr. Amanda Serenevy
1021 Queensboro
Mishawaka, IN 46544

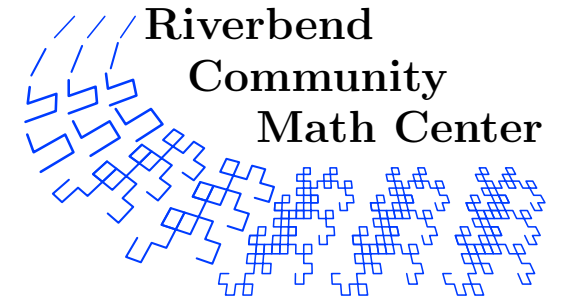

Phone: (574) 339-9111

Email: amanda@riverbendmath.org

The officers and directors of the Riverbend Community Math Center are:

Executive Director	Dr. Amanda Serenevy
Secretary	Bonnie Schermer
Treasurer	Dean Serenevy
Directors	Dr. Ronald Barker
	Dr. Anne Brown
	Caryn Ellison
	Miyuki Hughes
	Charlotte Pfeifer

The Riverbend Community Math Center is a non-profit organization dedicated to fostering public understanding and appreciation of mathematics. The Riverbend Community Math Center provides people of all ages with experiences that build interest and confidence in mathematics, science, engineering, and technology.

Math and Technology Academy

Free and open to the public, this program meets several times per week during the school year and through much of the summer. Students of all ages drop by for math tutoring, try hands-on activities, or work on an independent project. This program serves both students who need extra support and students who love math and want to learn more.

Math Studio

We offer weekly sessions for students at several after-school programs. Math Studio consists of a series of hands-on investigations into different aspects of a single topic. However, activities are designed with the understanding that students may not be able to attend all sessions.

Family Math Activities

Family Math activities allow elementary school students and their families to enjoy a fun math activity together. These activities are free and are typically offered on Sunday afternoons. Each Family Math topic is self-contained and lasts 30 minutes to an hour.

Custom Workshops / Events

We design math workshops and events for groups of all ages. We offer professional development for teachers, bring hands-on math activities to classrooms, train counselors to lead camp activities, coordinate fairs for schools, organize badge days for scout groups, and run activity booths during festivals.

Math Circles

Math Circles are for students who like math and want an extra challenge. These enrichment classes focus on particular topics such as digital electronics, mathematical origami, or fractal geometry. These in-depth investigations are for serious students who are able to attend most or all of the classes in a series. We typically hold a few Math Circles each year.

Math Circle Institute

Each summer, we co-organize a week-long workshop for mathematicians and teachers from around the country who are interested in leading math enrichment programs. Bob and Ellen Kaplan of the Boston Math Circle demonstrate a collegial approach to teaching that involves children in the exploration of deep mathematical ideas. Several local teachers join us each summer. In the afternoon, children of all ages join Math Circles led by adult participants.
