## Robert Neale's Magic Pinwheel

Fold paper in half

Fold top two corners to the center and flip the paper over

Be sure to tuck the inside piece as far into the fold as possible

Bring one corner to opposite edge to form a triangle and repeat with opposite corner

Push the large triangular region inside

Tuck the corners of the outside module into the groove of the inside module as snuggly as possible

You should see a parallelogram

Flatten the parallelogram to complete the module. Make seven more modules.

Continue to add modules around the octagon. Tuck the corners of the last module on either side of the parallelogram inside the first module.

Open the paper

Insert one piece into another so that the folded edge of each module is on the outside

Push gently to transform into a pinwheel. If necessary, sharpen the creases and slide it in and out a few times.
