## Robert Neale's Magic Pinwheel

Crease paper down the middle

Partially open the paper and push triangular region inside

Tuck the corners of the outside module into the groove of the inside module as snuggly as possible

Fold top corners to center line

Flatten the parallelogram.
Make seven more modules like this one.

Continue to add modules around the octagon. Be careful to tuck the corners of the last module on either side of the parallelogram sitting in the groove of the first module.

Fold figure in half along crease

Insert one piece into another so that the folded edge of each module is on the outside

Push gently until the octagon becomes a pinwheel. You may need to make creases sharper and jiggle the figure. Slide it back and forth a few times.

Bring bottom right corner to left edge to form parallelogram

Be sure to tuck the inside piece as far into the fold as possible
